A Decentralized Security Token Exchange by TokenMarket & Loopring

June 2, 2019

TokenMarket and Loopring are partnering to create a Decentralized Security Token Exchange. Plus CrowdZ raises \$5.5m from Barclays, and the STP \$7m from NEO Global Capital.

Big Banks Banking on Blockchain

May 27, 2019

UBS and other big banks are investing \$50m into a 'utility settlement coin' & cryptocurrency exchange Kraken issues shares – Finhash Network newsletter #37.

“Just wanted to let you know that I really enjoy this quality newsletter.

FYI: I never said that about any newsletter!”

Infloat

How are asset tokens
currently transacted?

Infloat

“Security tokens differ considerably from utility tokens and require more complex interactions between on-chain and off-chain actors and therefore require their own standard”

Infloat

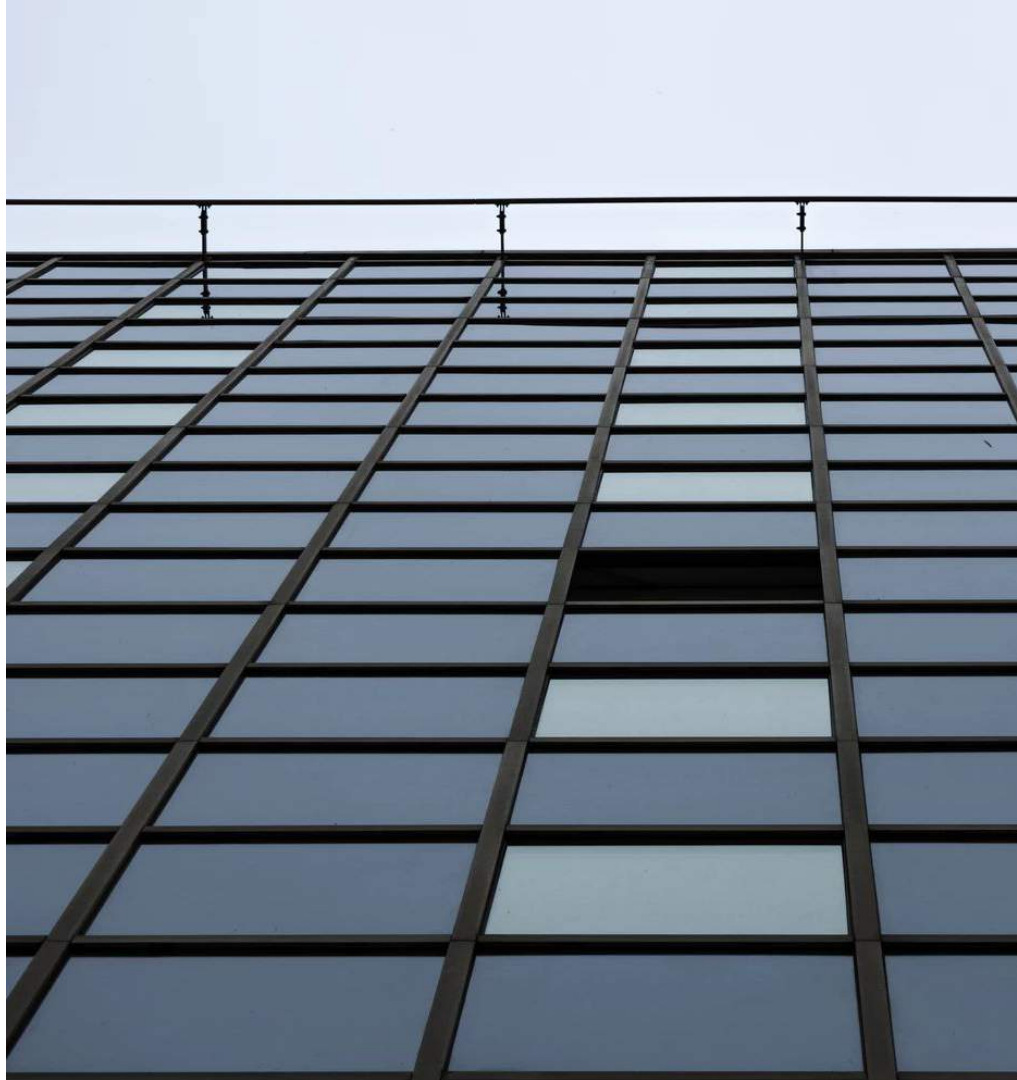

Tokenization Standards

- ERC-20
- ERC-1400
- ERC-1404
- R-Token
- DS Protocol
- T-REX

Other solutions

- Stellar
- Liquid Network

So why do we need purpose-built blockchains?

- Most blockchains “please all of the people, some of the time”

Infloat

Let's assume we're
designing
infrastructure for
securities from scratch

What do we need?

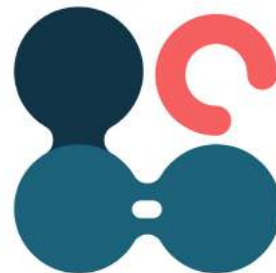

- Identity
- Privacy
- Speed
- Settlement Finality
- Compliance
- User Experience

Who are working on these
new purpose built asset
token blockchains?

Development timeline of asset token blockchains

What is the Future of Security Token Blockchains?

Infloat

Key Takeaways

1. There are real benefits to purpose-made blockchains (in this case for asset tokens)
2. Asset token blockchains are coming, but it will take a long time (first infrastructure, then adoption).
